SuZhou FaNuoDe Engineering Machinery Co., Ltd.

FND-AK47 Thermic Lance

The thermic lance is suitable for preheating the road surface in the early stage of road maintenance construction, increasing the adhesion between the road surface and the adhesive layer oil. The stable product quality, high heat conversion efficiency, and convenient operation effectively improve the quality of road engineering and reduce the labor intensity of workers.

Highway Preventive Maintenance Expert

SuZhou FaNuoDe Engineering Machinery Co.,Ltd.

Performance Advantages

1. Ergonomic Design

Easy to operate and safer. Efficient heat dissipation and air intake design, beautiful yet powerful.

2. Dual/ Overheat Protection

Double insulation protection is safer. The unique overheating protection device ensures the normal operation of heating components.

3. Stainless Steel Air Outlet

High temperature resistance, corrosion resistance, long service life, bright surface without rusting.

4. Innovative Handle

Unique handle design, good grip feel, natural extension of arms and fingers, comfortable and anti fatigue grip.
